FEATURES

- ✓ Closed circuit system
- ✓ Easy to move and transport
- ✓ Quick and simple assembly
- ✓ No water waste
- ✓ No building permits required
- ✓ Environmentally friendly

A self-contained, environmentally friendly, cleaning system for construction plant and equipment. It comes as standard with heavy duty automatic X-TECH-30 filtration systems. The wash bay is equipped with galvanized ramps and 87" mm high walls. The wash bay floor pan directs the dirty water and sludge from the equipment being cleaned to a solids collection tank at the rear of the wash bay. Inside the rear tank, a float switch activates a diaphragm pump which delivers the dirty water into the filtration tanks to start the filtration process. After the water has been through this process, a booster pump delivers the water again to your pressure washer. Through the filtrating system, you can use the same water repeatedly. The filters inside the separator tank can be easily replaced, guaranteeing an adequate filtering barrier.

Technical data

Useful dimension	236" x 236"
Total dimension	283" x 285"
Filtration tank dimension	(X-TECH-30) 144" x 40" x 85"
Maximum load capacity	11,023 lbs
Walls standard height	87"
Total dry weight of the bay	9,635 lbs
Diaphragm pump	0,59 kW – 180lt/min
Booster pump	0,37 kW – 5 to 40 lt/min
Filtering system	X-TECH-30
Option filtering system	X-TECH-15 - 60
Option maximum load capacity	22,046 lbs
